SUMMARY

Building .NET solutions since 2019 (commercially since 2024) with strong foundation in computer engineering, software design and mentoring. I am a proactive, yet pragmatic specialist striving for clean communication and engineering practices.

BACKGROUND

Proactive youth: Awarded by JASU and VNTU for achievements in software design, awarded by Governor of Sumy Oblast for academic and public achievements.
Mentorship: Teaching experience C#, C++ and Python to kids help me write clean documentation for adults.

EXPERIENCE

Desktop: I built commercial desktop application to display Bluetooth devices charge information from ground up using WinUI 3 and Windows App SDK APIs. Application uses MVVM pattern, reactive programming and is covered with unit and UI tests. I implemented low-level device communication and reverse engineered proprietary Bluetooth protocols.
DevOps & Infrastructure: Engineered a centralized, version-controlled Azure DevOps YAML pipeline ecosystem to migrate legacy, project-specific Classic configurations.

- **Pipeline Architecture**: Decomposed the system into reusable steps with aggregation into master-templates to eliminate configuration drift and human errors across multiple desktop products.
- **Session Troubleshooting**: Resolved complex UI session limitations on Windows agents to enable stable automated desktop UI testing.
- **Workflow Integration**: Utilized the Azure DevOps REST API to optimize the developer experience, enforce company workflow gates, and thoroughly documented the architecture in the internal wiki to ensure smooth onboarding.

Web & AI: I architected enterprise RAG microservice using FastAPI, PostgreSQL, SentenceTransformers and unstructured.io to provide embeddings to chatbot from external sources. The service is containerized and has recurrent behavior that can be configured without redeploying the service.
Legacy Modernization: Overhauled the architecture of a legacy 6k LoC monolithic UI component in screenshot taking application from 2016. Isolated separate viewer/editor concerns, eliminated complex UI code-behind graphic calculations, and implemented a clean data-driven architecture. Isolated components were shipped incrementally to keep the smooth transition, so application is more stable and maintainable now.

CAREER

08.2024 – now	**Junior C# Developer** `ASP.NET Core / Azure DevOps / MSBuild / Docker / Python / AI / PowerShell / WPF / UWP / WinUI`	**Digital Cloud Technologies** *Remote, Ukraine*
03.2024 – 08.2024	**Trainee C# Developer** `C# / WPF / UWP / MVVM`	**Digital Cloud Technologies** *Remote, Ukraine*
04.2023 – 06.2024 part time	**Teacher** `C# / Unity / Python / lua`	**Professions of the Future Academy** *Romny, Sumy region, Ukraine*
09.2023 – 05.2024 part time	**Mentor (Section Leader)** `C# / C++`	**Junior Academy of Sciences of Ukraine** *Romny, Sumy region, Ukraine*

EDUCATION

2024 – 2027 remote	**Bachelor's Degree** Computer Science	**Cherkasy State Technological University**
2020 – 2024	**Junior Bachelor's Degree** Computer Engineering	**Romny Professional College of Vadym Hetman Kyiv National Economic University**

LANGUAGES

Ukrainian - native
English - B2 (upper-intermediate)

INTERESTS

I am interested in vintage technology, which expressed through our Volkswagen Jetta Mk2 '87 restoration project with my wife. Learning about retro gaming and computing history inspired me to become a software engineer.

SKILLS

C# | ASP.NET Core | MSBuild | Azure DevOps | Docker | Blazor | WinUI | WPF | UWP | PostgreSQL | Python | AI | FastAPI | TypeScript | React | Angular | PowerShell | C++
