Personal Website (WhatTheJunkyard)

SUMMARY

Software developer with over 6 years of programming experience, including more than 2.5 years of commercial .NET development. Experienced in Windows desktop applications, Azure DevOps automation, backend services, and legacy system modernization. I enjoy taking ownership of complex engineering challenges, improving development workflows, and sharing knowledge with others.

EXPERIENCE

08.2024 – present
C# Developer — **Digital Cloud Technologies**
`ASP.NET Core / Azure DevOps / MSBuild / Docker / Python / AI / PowerShell / WPF / UWP / WinUI`
Remote

Desktop

- Built a commercial WinUI 3 application from scratch to display battery levels of connected Bluetooth peripherals, implementing low-level device communication through protocol research, Wireshark packet analysis, and experimentation. Applied MVVM with ReactiveUI and added unit and UI tests.
- 6,000-line single-file screenshot editor split into a viewer and an annotation editor built on reusable tools and command history; delivered in increments so users got a more stable editor early
- Legacy desktop apps migrated to modern .NET versions and SDK-style projects
- Expanded unit and UI tests, native stowed exceptions diagnosed from crash reports on a Bluetooth audio companion app

DevOps & Developer Experience

- Shared, centrally maintained YAML pipeline templates replacing Classic pipelines; migrated 6 projects, enabled parallel product builds, and standardized pipelines for new projects
- Reduced post-build cleanup from up to 15 minutes to < 10 seconds; scheduled agent cleanup prevents disk-full failures
- Configured Windows build agents and integrated UI smoke tests to catch application startup failures before QA
- Implemented PR validation, outdated-dependency reporting, build-to-PR links, and QA/release workflows. Documented the setup and processes to support adoption across the team

Web & AI: Python FastAPI microservice for a RAG chatbot over a legal-document database: Unstructured.io, SentenceTransformers, PostgreSQL, scheduled tasks and tracked documents configurable at runtime; part of the production system

03.2024 – 08.2024
Trainee C# Developer — **Digital Cloud Technologies**
`C# / WPF / UWP / MVVM`
Remote

- Cryptocurrency tracker prototype built as a technical assessment: CoinCap and CoinGecko integration.
- First prototype of the Bluetooth device charge display app, later developed into the commercial WinUI 3 application
- Hands-on work with WPF, UWP, and .NET Framework on smaller development tasks

04.2023 – 06.2024
part time
Teacher — **Professions of the Future Academy**
`C# / Unity / Python / Lua`
Romny, Sumy region, Ukraine

09.2023 – 05.2024
part time
Mentor (Section Leader) — **Junior Academy of Sciences of Ukraine**
`C# / C++`
Romny, Sumy region, Ukraine

EDUCATION

2024 – June 2027
remote
Bachelor's Degree — **Cherkasy State Technological University**
Computer Science

2020 – 2024
Junior Bachelor's Degree — **Romny Professional College of Vadym Hetman Kyiv National Economic University**
Computer Engineering

LANGUAGES

Ukrainian - native
English - B2 (upper-intermediate)

INTERESTS

I am interested in vintage technology and currently restoring a 1987 Volkswagen Jetta Mk2 with my wife. My interest in retro gaming and computing history inspired me to become a software engineer.

SKILLS

Languages: C#, Python, C++, TypeScript
.NET: ASP.NET Core, Entity Framework, WinUI 3, WPF, UWP, Blazor, SignalR, Rx.NET
DevOps: Azure DevOps, YAML, MSBuild, Docker, PowerShell
Other: PostgreSQL, FastAPI, React, Angular
